ARMADA TRANSPORT

The Armada Transport service is a big part of our sustainability work. Everything that can not be carried away under your arm will be transported from the fair in a combined transportation arranged by Armada in cooperation with a transportation company. This is to save the environment of unnecessary emissions but also to reduce the chaos of trucks narrowing in a very small space. Therefore we offer you the Armada Transport service from the fair as a part included in the base kit. The Armada Transport service is a part in our strive to get greener year by year.

- ◎ You are responsible of packing the goods according to given instructions on either pallets or in suitable packages. If you have enough goods it can be placed on an EU-pallet (base not bigger than 120x80 cm, and not taller than 180 cm). Maximum weight per full size pallet is 800 kg and 400 kg per half-pallet. Plastic should be wrapped around the pallet to make sure nothing falls off and to reduce the number of labels. You are responsible for all damage that occurs if these guidelines are not followed. You are also responsible of making sure everything is correctly labelled and that the delivery address filed in the "Complete Registration" form is correct. Further guidelines for packing will be handed to you at the checkout during the second day of the fair.
- ◎ Damaged goods will be reported directly to the transportation company as Armada hands over the responsibility as soon as the goods have left the fair, please notice that transportation companies takes no responsibility of damaged goods that stands out from the pallets or if the packages have not been sealed properly.
- ◎ All goods will be delivered to you by the transportation company according to their normal delivery terms during the following week after the fair. If you have an urgent need for your goods earlier than this we will try to arrange a transportation the very same week as the fair. This information must have reached the Armada Transport Coordinator not more than a week before the fair. Notice that delays are not always unavoidable and that the transportation company have the responsibilities for the deliveries. Delays that may affect you will be dealt with by them.

Would your company strive to get even greener with us, we would also like to arrange a common pickup of goods in Stockholm (and closely surrounding areas, eg Södertälje) before the fair to reduce numbers of transports even more. At a cost of 550 SEK this could be added. Goods will then be picked up the week before the fair and will be left at the location of the stand for you to build.

If you have any questions, please contact:
